

## GMP Fill/Finish Service

### Advanced Aseptic GMP Fill/Finish Services

Fill/Finish is typically the last step of the injectable drug manufacturing process, but it can often be a limiting step in how quickly a drug product can reach clinical trials or the global market. VGXI addresses this challenge by offering in-house GMP aseptic fill/finish services specifically designed for parenteral products. Whether as part of a manufacturing campaign or as a stand-alone service, VGXI excels at delivering solutions that not only minimize fill losses but also preserve valuable active materials, meeting even the most stringent requirements.

- Formulation with non-active or excipient ingredient
- Validated aseptic filtration processes
- Automated filling process within cGMP ISO 5 filling enclosure
- Single-use product contact services
- Vial volumes from 2 to 10mL

Our advanced aseptic fill finish manufacturing services ensure the sterility and integrity of your clinical or commercialized products. Batch sizes can accommodate varying quantities, scaling from hundreds of vials up to 20,000 vials per batch.

## About VGXI

Backed by two decades of production and regulatory expertise, VGXI is the ideal CDMO partner to support every step of your product pipeline from early development to market launch. Our dedicated team and state-of-the-art facilities ensure that your experience with VGXI exceeds expectations with unrivaled scale, reliability, and excellence. VGXI doesn't just meet today's demands, we're future-proofing demand for tomorrow's innovations and setting new industry benchmarks with the world's largest plasmid DNA manufacturing capacity.

Our validated filling operations can accommodate a variety of finished dosage vial volumes from 0.3ml to 10ml extractable. Batch sizes can accommodate varying quantities, scaling from hundreds of vials up to 20,000 vials per batch.

Choose VGXI for GMP aseptic fill/finish services that combine cutting-edge technology, expert formulation, and personalized solutions focused on quality, speed and flexibility, to propel your biopharmaceutical development forward.
